

## Mission Statement

SRC Technologies, Inc. is an Artificial Intelligence company which brings to the market innovative, forward thinking hardware/software solutions designed to make the flow of information compatible across all platforms for the cyber world in a true secured access environment. We provide to the world a new architecture and design for what we call (HAI) or Heuristic Artificial Intelligence. We have developed a multi-tiered platform for this HAI design and we are the first to offer it. Due to its small footprint we provide maximum portability. This is our core technology..

The future is the flow of terabytes of information over the worldwide grid which is beginning to take form. That access needs to be operated in a secured environment and managed. We manage this immense amount of data and administer secured access protocols for this information which provides a technology that makes true cross platform communication compatibility a reality.

Based on the information provided, our Heuristic Artificial Intelligence has the added feature of learning and making predictions. It teaches itself to make better predictions as time goes further.

We provide the worlds only absolutely secured, cross talking and endlessly adaptable Artificial Intelligence architecture.

Today's computers and hand held devices are referred to as being SMART.

We have made them INTELLIGENT.
